

Advisor Accessible Pedestrian Signal

Product Overview:

Advisor APS is a fully integrated pedestrian station (FIPS) that provides the pedestrian with visual, tactile and audible information about the intersection crossing at the pedestrian station. Advisor provides the necessary information to understand the geometry of the crossing and the status of the walk display.

Benefits:

- Advisor is a simple solution to existing pedestrian crossings. Installation is quick and straight forward. Each Advisor APS is independent gathering information from the signal sent to the walk display while utilizing the existing wiring from the traffic control cabinet.

Operating Features:

- Ambient gain control adjusts audio volume to parallel ambient noise levels

Applicable Guidelines

- MUTCD - meets and exceeds all guidelines
- TAC – meets and exceeds all guidelines

Outputs

- Locator Tone
- Acknowledgement message / tone / visual LED
- Location Information message
- Walk cycle tones / messages

Campbell Company was founded over 35 years ago by a man who understood the importance of innovation and reliability. The company remains focused on the same key beliefs. All Campbell Company products are designed to incorporate these key ideals. We design and manufacture our products in a process orientation that allows us to build relationships with the end users. These relationships, based on the customer's faith in our service and products, provide a path to increased integration of pedestrianism into the transportation model.

Every Campbell product has a company of dedicated professionals standing behind it. When you make the decision to use Campbell Company products on your intersections you can be sure the decision you made is the best decision for your agency and the accessibility and safety of your pedestrians. Our products are the best available and we guarantee end user satisfaction.
