Flasher/Detector Enclosures

As a leading manufacturer of enclosures and illuminated street name, blank out and lane control signs in the U.S., Southern Manufacturing has a history of quality and reliability that dates back to 1939.

Utilizing a clear vision for traffic safety, Southern Manufacturing is dedicated to improving technology and fabrication. At the same time we are keeping the highest standards of quality, reliability and low cost of operation for our customers. Southern's depth of engineering and manufacturing turn today's challenges into tomorrow's realities

Southern Manufacturing offers a series of Flasher and Detector Enclosures for the traffic industry. All sizes are available with your choice of mounting styles or may be supplied with mounting tabs to meet your requirements.

All enclosures are made with sheet aluminum, this includes all of the panels, doors, bodies and shelves, with a neoprene cellular gasket that is affixed around the entire door to ensure a weather tight seal. The enclosure comes with hinges that are continuous stainless steel and secured with stainless steel fasteners. A #1 or 2 slam lock or a skeleton key is provided for all Flasher and Detector enclosures.

The standard finish is mill aluminum. We offer additional finishes to meet your specifications. Screened vent slots on each side of the cabinet create a natural movement of air and has a cooling effect on the electrical equipment. A full width shelf may be installed in a Flasher or Detector enclosure per your specifications.

Flasher and Detector Enclosures

Ventilation:

One screened vent slot on each side of the cabinet creates a natural movement of air and has a cooling effect on electrical equipment.

Material:

All of our enclosures are made with sheet aluminum. This includes all panels, doors, bodies, and shelves. The standard finish is mill aluminum. Additional finishes are available upon request. Southern Manufacturing matches Federal Standard 595B Paint Colors and RAL for powder coat selection.

Doors and Locks:

A cellular neoprene gasket is affixed around the entire door to ensure a weather tight seal. All hinges are made of continuous stainless steel and secured with stainless steel fasteners. A #1 or 2 slam lock or a skeleton key is provided for all Flasher and Detector Enclosures.

Shelves:

A full width shelf may be installed in a Flasher or Detector enclosure per your specifications.
